Private recovery sheet

Complete by hand only after printing

Enter only necessary secrets unavailable from vaults or a password manager. Reference values already stored securely. Cross out unused fields. Never upload, scan or photograph the completed sheet.

Installation / responsible person / verification date

Recovery package: location / authorized person / protected spare copy

Vault: file or vault ID / recovery route / entry reference

Vault unlock secret: only if otherwise unavailable

Emergency login: system / access route / username / reason for exception

Emergency password: only if unavailable from another secure store

Do not copy private keys or entire vault contents here. Store large key files separately under protection and record their location. Replace obsolete paper copies after changes according to the agreed policy.

Private recovery sheet

Complete by hand only after printing

Enter only necessary secrets unavailable from vaults or a password manager. Reference values already stored securely. Cross out unused fields. Never upload, scan or photograph the completed sheet.

Backup decryption: backup / key reference / recovery route

Missing decryption value: only if needed outside the vault

Password manager: emergency opening / required value or document reference

MFA recovery: system / required replacement codes / separate storage location

Other justified exception: system / purpose / actual missing secret

Access tested by / date / independent contact / next review

Do not copy private keys or entire vault contents here. Store large key files separately under protection and record their location. Replace obsolete paper copies after changes according to the agreed policy.
